Illustrative timeline (not data)
decision point
input scored W
input scored Stage 1
risk set $\mathcal{A}_0$: decision points every 30 s while $t < T_2$
$Y_t = 0$
$Y_t = 1$: first N2 within 300 s
W (scored wake)
N1
W
N1
N2 (first Stage 2 from T_2)
lights-off
T_1: first N1
T_2: first N2
time (30-s epochs)
decision time t; input = preceding 30 s
(outlined epoch, scored N1)
horizon $(t, t + 300$ s$]$
contains T_2, so $Y_t = 1$
